INFORMATION DISCLOSURE STATEMENT

Sir:

In accordance with 37 C.F.R. 1.98, I am submitting a completed "INFORMATION DISCLOSURE STATEMENT BY APPLICANTS" (*Form PTO/SB/08A*) with patents and/or publications as delineated therein attached.

EP 0 593 876 A1 discloses a method to provide an apparatus for rinsing dishes (15) with which the article (15) to be rinsed can be cleaned, in a simple way, very quickly but without reducing the hygienic cleaning action, even by the user of drink-dispensing machines himself, and in which the water and energy requirement is kept as low as possible and the emission of chemicals is avoided as far as possible, the apparatus is a mini-dishwashing machine (1, 1', 1'') with a program-control device (14), the program-control device (14)

containing a rinsing program consisting of the subprogram sections "First application of water-permeated steam to the article (15) to be rinsed", "Application of hot water mixed with cleaning agent to the article (15) to be rinsed", "Second application of water-permeated steam to the article (15) to be rinsed" and "Cooling of certain areas of the article (15) to be rinsed"; it being possible for a subprogram "Clear rinsing" to be optionally inserted into the rinsing program before the subprogram "Cooling of certain areas of the article (15) to be rinsed" and/or a subprogram "Drying" to be optionally added to the rinsing program after the final subprogram, and a separate container (20, 30, 40, 50) being provided for any liquid used in the respective subprogram, in which containers the liquids are permanently held on standby in the switched-on state of the apparatus.

DE 1 226 248 B1 discloses a dishwasher 1 having upper and lower spray arms 2. A continuous run-through heater 4 is disposed in a circulation path including the spray arms 2 and a circulation pump 5, the heater 5 being operable to heat a liquid during the pre-wash operation of the circulation pump 5.

DE 197 58 064 A1 discloses that during the prewash part of a dishwasher program cycle the main wash water is introduced into a reservoir and a standby program is operated to heat the water by circulation round the wash chamber in preparation for the main wash part of the program.

DE 197 58 063 A1 discloses that during the prewash part of a dishwasher program cycle the main wash water is introduced into a reservoir and heated by means of a heat exchanger in preparation for the main wash part of the program.

DE 197 58 062 A1 discloses that during the prewash part of a dishwasher program cycle, the main wash water is introduced into a reservoir and heated in preparation for the main wash part of the program.

EP 1 082 938 A2 discloses a dishwasher and the dishwasher (1) has spray arms (3) and a tank (2) in which used water is held. A heat exchanger (4) contains an optional electric heater and a copper inlet pipe (5) for fresh water for the main wash which is then led into a boiler (7) for finish heating and delivery to the spray arms.

If no translation of pertinent portions of any foreign language patents or publications mentioned within the "INFORMATION DISCLOSURE STATEMENT BY APPLICANTS"

is included with the aforementioned copies of those applications, patents and/or publications, it is because no existing translation is readily available to the Applicants. As per the Notice in 1273 OG 55 (August 5, 2003) no copies of any above-mentioned US patents and US patent application publications are submitted for this application which was filed after June 30, 2003.

Respectfully submitted

Russell W. Warnock
